

Creating a responsive design is crucial for ensuring that your HTML and CSS portfolio website looks good and functions well on a variety of devices, including desktops, tablets, and smartphones.

Here's the steps that I did to implement responsiveness in my website:

The screenshot shows a Visual Studio Code editor window with a dark theme. The file explorer on the left shows a project structure with files like 1.jpg, 2.jpg, 3.jpg, 4.jpg, 5.jpg, 6.jpg, animations.css, bootstrap.css, favicon.png, FIRST YEAR INF..., photo.jpg, responsive.css, styles.css, and index.html. The main editor area displays the content of responsive.css, which contains several media queries for different screen widths. The status bar at the bottom indicates 'Ln 129, Col 4', 'Tab Size: 4', 'UTF-8', 'CR LF', and 'CSS'. A 'Prettier' icon is also visible. An 'Activate Windows' watermark is present in the bottom right corner.
