

Dunhill Portfolio Website Documentation

The primary goal of this project is to design and develop a personal website portfolio using HTML (Hypertext Markup Language) and CSS (Cascading Style Sheets). This digital space will serve as a showcase of my skills, projects, and identity. How I started this project is that I tried to search guides and know how's in YouTube and w3schools on how to use html and css then I also tried to apply the learnings I got from the program of intro to computing and finally started my journey in making my website portfolio. At first I tried to search for references in google then I tried to imitate their word and I adjusted my code to fit my needs for my website

My objectives is to Create a visually appealing and cohesive design that reflects your personal brand and professional identity, Showcase my skills in an organized and engaging manner to captivate visitors, Ensure the portfolio is accessible and visually appealing across various devices and screen sizes, Implement a contact form to facilitate communication, Write clean, well-structured HTML and CSS code following best practices and standards,

The tools I plan to use is visual studio code for coding html and css for design and some pictures that I can ensure that my viewers would recognize that is me. I'm also going to use GitHub because that's where I'm going to put my project and I'm also going to use 000webhost to host my finished website

I plan to start my html and css website with a header and a navigation bar containing my name contact education skills and portfolio then I plan to put some design using css after that i move to the body part and I will wrote the information about me as well as the information about my education, contacts, portfolio, skills. Then I will make another css and name it navbar.css to my code for navigation bar to. After that I will for a multipurpose bootstrap code to put in my website and name it bootstrap.css. Then I will make another css to make some nice and simple animations to make my website look neat I name the css animation.css after I finished everything I will go to 000webhost to host my portfolio website
